SCHEDULE

Sharing 

Download and unpack zip files containing historical data from weather stations in the Netherlands. The zip files contain a single txt file and there is a separate zip file for each weather station. The workflow downloads all the zipfiles as temporary files and then unions the text files into a one dataset.

The data is at the day level so the workflow should be scheduled to run daily.

Author: Hanna Nykowska

Viewing logs in the admin console

Redis Enterprise provides log files for auditing and troubleshooting. You can see these logs in the admin console and on the host operating system.

To view the audit logs:

1. Log in to the Redis Enterprise Software admin console.
